1	Race (New season)	Oval Ski Club members can take part in a new race to celebrate the start of the new skiing season. This is a great way to meet new people and enjoy your skiing to the max.	Fri, 08 Feb 2013 13:02:25	Edit   Destroy
2	Entry date closing soon!	The closing date for the Pendle racing winter league is fast approaching. If you wish to enter, be sure to do so before it is too late.	Fri, 08 Feb 2013 13:03:35	Edit   Destroy
3	Frostbite racing is back!	After the success of last year's event, Oval Ski Club will be taking part in the frostbite race once again for 2013. More information will be posted shortly on the racing team page.	Fri, 08 Feb 2013 13:05:57	Edit   Destroy

The database diagram above has been built into the announcements webpage on the Oval Ski Club website. From this, these announcements can be posted on the homepage which contains an update section that a user will see as soon as they visit the website. On the announcements webpage there is a database built in which allows new records to be created. When the user clicks “New”, a form will appear with a title and body section allowing them to enter information and create a record.

The database itself contains an ID which is a numerical value allocated to each announcement that has been added. Each announcement has a title and body so a user can see what the announcement is related to and additional information respectively. Also implemented into the database is a date and time stating when each announcement has been created. The final feature the database contains is an actions field. This enables each announcement to be edited in the instance of adding extra information about an annual general meeting for example or stating changes to the destination of Oval Ski Clubs next holiday destination. There is also the option to delete an article if necessary. If a record has become irrelevant it can be deleted simply by clicking the destroy button. A window will then appear asking the user do they wish to delete a record, when the “Ok” option has been selected, the website will automatically navigate back to the announcement webpage and show that the record has been deleted.
